Delve — a language to bring database experience into machine learning code

1. Data are the new gold; empowers lots of ML-based technologies.

2. Data are stored in RDBMS, while ML algorithms are coded in general lang's.

3. We bring simple relational model of programming into a general language.

4. Profit: no need in dumping your data out of RDBMS before piping into ML.

5. Case Study: Determining Social Graphs of Software Developers on GitHub.
